

NBC No Bolts Cleat

Non-Metallic, short circuit tested,
patent pending

Qualifications

Ellis No Bolts Cleat is a fully polymeric cable cleat designed for fast installation. The cleat is manufactured from a high strength nylon specifically formulated to meet the London Underground 1-085 specification.

Due to its non-metallic design the cleat is impervious to 'bi-metallic corrosion' and suitable for use in the harshest of environments.

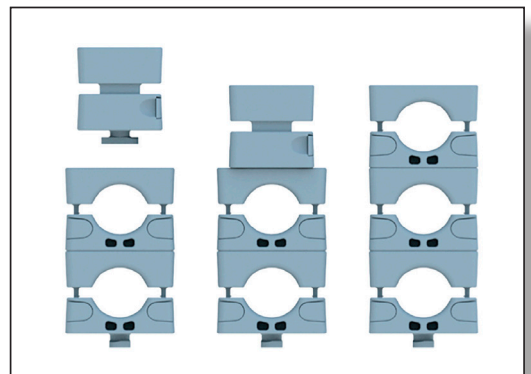

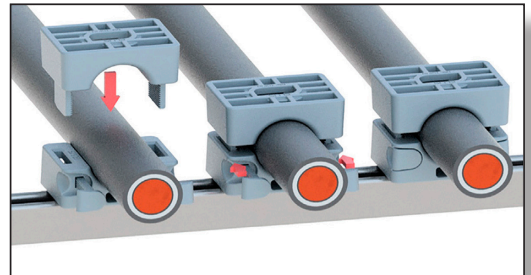

Installation

The cleat can be opened and closed using two locking tabs. The clamp can easily be stacked with a bayonet locking pin, which can be rotated 90°. Maximum three cables in height, unlimited number of cables in width. All cleats have the same outside dimensions. Internal goals are taken care of by an appropriate liner.

The cleat can be fastened with an 8mm bolt or bayonet straight into a unistrut rail.

Specifications

- Stackable design for multiple cable runs
- No risk of damaging cable
- Range suits Ø18 – Ø55mm single cables
- Very fast installation

NBC No Bolts Cleat

Table

Art.no	Title	Cablediameter		Dimension				
		Min dia mm	Max dia mm	W(max) mm	H(max) mm	D mm	Ø Hole	Weight g
