# CABLE CLEATS 

## For Rail Administration

## VULCAN VRT

The maximum recommended distance between each bracket for two and three core is 70 cm , and 1.2 m for single cable. This is calculated from the "worst case" of high short-circuit performance and minimum cable diameter.

Vulcan cable cleats are made of steel grade 316 (stainless). The plastic material is of type LSF (Low Smoke \& Fume) to limit the amount of smoke and gas from any fire.

If terminations, the last cleat should sit as close to the end seal as possible, maximum 70 cm from the lugs fixing.

Vulcan cable cleat has a liner (see table) which can be removed before or after fixing.
The liner increases flexibility for cable diameters. Vulcan comes as standard with M10 x 25 mm fixing bolt and nut.

## PHOENIX FP

Phoenix FP is a cleat for cohesion and fireproof extension of single return line.

Phoenix cleat consists of stainless steel 316. Delivered without bolt. The bolt and connection occurs with the same screw, selected as needed.

Alternative dimensions available on request.

| (Returnline) | For single core: |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | El.no | Type |  | For cable dia. | Cross section/Voltage |
|  | 1318423 | 1FP 13SS |  | 1x19-23 | 1 $\times 240 / 371 \mathrm{kV}$ TXIX |
|  | 1318424 | 1FP 14SS |  | 1x23-27 | 1 $\times 240 / 191 \mathrm{kV} \mathrm{IX}$ |
| \% | 1318182 | VRT 02 |  | $1 \times 43-58$ | 1x240-36 kV |
