

SAFE CUTTER

With battery operation and remote control

Safety Cutter for smarter and safer work. Consists of B68M-P18KV-RC3 18V battery operated pump, which is a lightweight, high capacity pump, equipped with radio controlled remote control that secures the user from voltage when cutting cables, as well as providing greater distance between the user and the cutting site.

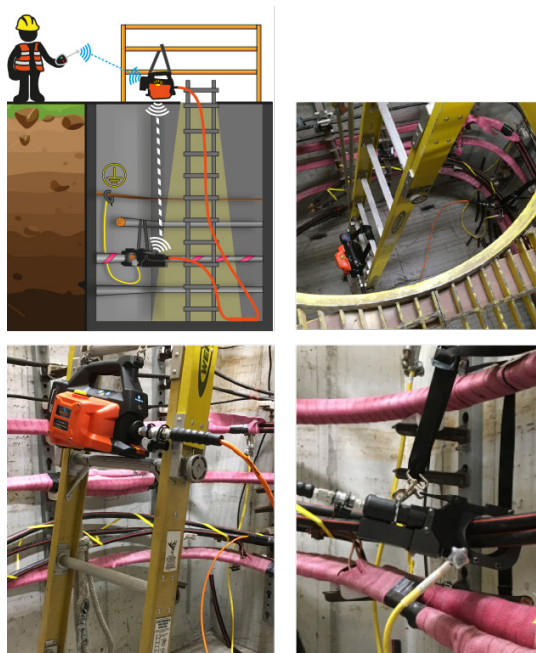

The new 18V 7Ah batteries deliver high capacity, which improves cutting speed significantly compared to conventional hydraulic foot pump.

Cutting head B68RC3 is equipped with a unique sensor that is wirelessly connected to the pump. The sensor is fully protected and has battery-free technology.

The unit is equipped with a unique system for stopping the pump when the cutting head's sensor signals that the cutting blades have completed the cut. Then these return automatically to open position. The distance between the pump and the operator can be up to 20 meters.

Alternative cutting heads

- The cutter comes with three different cutting heads:
- Cutting head B68RC3-85 (85 mm cutting head dia.)
- Cutting head B68RC3-96 (96 mm cutting head dia.)
- Cutting head B68RC3-120 (120 mm cutting head dia.)

Art. no.	Title
99 36 07	Safety cutter with pump B68M-P18KV-RC3 and cutting head B68RC3-96 (96mm cutting head dia.)
99 36 11	Cutting head B68RC3-120 (120 mm cutting head dia.)
