

CABLE MOUNTING STAND

Cable mounting stand Apus 2.0 has been developed in collaboration with installers to make it easier and reduce the time for cable preparation of medium and high voltage cables when splicing and termination.

With APUS 2.0, you get ergonomic access to the cables and can thus avoid work-related injuries over time. Good ergonomics also contribute to higher quality in the cable preparation and installation of cable accessories.

Each cable clamp can be individually adjusted to exactly the right position. Even if the cable comes vertically from below, it can be attached to the stand. With generous height adjustment, the stand can provide a mounting height of only 30 cm above the ground.

The support legs are wide and adjustable for all types of terrain. They can be angled out to 180 degrees.

El.no.	Title	Length (mm)	Width (mm)	Height min-max (mm)	Weight (kg)	Cable dia. (mm)
